Click Apply to save the details. Click Reset to revert to the last saved state.

Instance Type:	<input type="text" value="Sandbox/Development"/>
Deprecated. The preferred way of configuring HTTP and HTTPS hostnames is by using new features of the site aliases configuration ("SEO > Aliases Configuration"). The HTTP/HTTPS hostname values set in this section will be used if no hostnames are defined by aliases configuration and are intended only to support an older configuration style.	
HTTP Hostname:	<input type="text"/>
HTTPS Hostname:	<input type="text"/>
Instance Type: All	
Cartridges:	<input type="text" value="int_katapult_SG:app_storefront_controllers:app_storefront_core"/>
Effective Cartridge Path:	int_katapult_SG app_storefront_controllers app_storefront_core plugin_apple_pay plugin_facebook plugin_payments plugin_pinterest_commerce plugin_web_payments bc_content core

If using Visual Studio code, use the below **dw.json** format to upload the cartridges to the sandbox. Place it at the root of the working directory.

```
{
  "hostname": "your-sandbox-hostname.demandware.net",
  "username": "your_user",
  "password": "your_password",
  "code-version": "version_to_upload"
}
```

Set the Cartridge to Compile Front-end

Make sure that the cartridge it's a part of the compiler inside of the package.json.

```
{
  "src": "cartridges/int_katapult_SG/cartridge/js/",
  "dest": "cartridges/int_katapult_SG/cartridge/static/default/js/"
}
```

```
{
  "src": "cartridges/int_katapult_SG/cartridge/scss/default/",
  "dest": "cartridges/int_katapult_SG/cartridge/static/default/css/"
}
```

Compile Front-end

Run the command **gulp js** to compile front-end scripts.

Run the command **gulp css** to compile front-end styles.

Import Metadata

- Locate folder **katapult_site_import** inside **metadata** folder, change site name if needed inside **sites** folder and compress the **katapult_site_import** folder to **katapult_site_import.zip**
- Log in to the **Business Manager**
- Click **Administration > Site Development > Site Import & Export**
- Use the upload control to browse the **katapult_site_import.zip** file located in the **metadata** folder
- Click **Upload**
- Select the **katapult_site_import.zip** and click Import, press OK on the confirmation alert. Import should complete successfully

JOBs

Our JOBs cover four Methods: **Shipped**, **Cancel**, **Cancel Item** and **Completed**.

Shipped - Set a delivery date in the Katapult's management.

Cancel - Cancel the entire order.

Completed - Mark an order for not to be reprocessed.

Cancel Item - Cancel the items individually.

 Your integration must provide the update line items in the SFCC.

You can Update Line Items through:

OCAPI (Open Commerce API)

- Add a Hook to POST order update to the cancel item endpoint. Like below:

```
var orderTest = OrderMgr.getOrder("00001301");
Transaction.wrap(function(){
    for(i in order.productLineItems){
        //Here goes a test in order to verify which line item has to be canceled.
        orderTest.productLineItems[i].externalLineItemStatus = "canceled";
        orderTest.productLineItems[i].custom.KAT_cancelItem = true;
    }
});
```

XML

- The xml file must have a content like below:

```
<external-line-item-status>canceled</external-line-item-status>
<custom-attributes>
  <custom-attribute attribute-id="KAT_cancelItem">true</custom-attribute>
```

 A test controller was created. In this controller we pass the parameters in the url, where the "CancelItem" is the controller, "cancelItem" is the method, "oid" is the order ID and the "oli" is order line item. See a example url below:

<https://www.yoursite.com/CancelItem-cancelItem?oid=00001203&oli=sony-ps3-console>

To avoid change Scope every time, was created one JOB to SFRA and another to SG:
