Order Status: Open Apply Cancel

Shipping Status: Open Cancelled

- Now the order is canceled in Salesforce, to cancel the order in Katapult you need to run a Job. To do this go to **Administration > Operations > Jobs**

## Jobs

Our JOBS cover four Methods: **Shipped**, **Cancel**, **Cancel Item** and **Completed**.

**Shipped** - Set a delivery date in the Katapult's management.

**Cancel** - Cancel the entire order.

**Completed** - Mark an order for not to be reprocessed.

**Cancel Item** - Cancel the items individually.

**i** Your integration must provide the update line items in the SFCC.

You can Update Line Items through:

OCAPI (Open Commerce API)

- Add a Hook to POST order update to the cancel item endpoint. Like below:

```
var orderTest = OrderMgr.getOrder("00001301");
Transaction.wrap(function(){
    for(i in order.productLineItems){
        //Here goes a test in order to verify which line item has to be canceled.
        orderTest.productLineItems[i].externalLineItemStatus = "canceled";
        orderTest.productLineItems[i].custom.KAT_cancelItem = true;
    }
});
```

XML

- The xml file must have a content like below:

```
<external-line-item-status>canceled</external-line-item-status>
<custom-attributes>
  <custom-attribute attribute-id="KAT_cancelItem">true</custom-attribute>
```

**i** A test controller was created. In this controller we pass the parameters in the url, where the "CancelItem" is the controller, "cancelItem" is the method, "oid" is the order ID and the "oli" is order line item. See a example url below:

<https://www.yoursite.com/CancelItem-cancelItem?oid=00001203&oli=sony-ps3-console>

US/CancelItem-cancelItem?oid=00001203&oli=sony-ps3-console

To avoid change Scope everytime, was created one JOB to SFRA and another to SiteGenesis:

## Switch site to SiteGenesis

- Open the options and select SiteGenes

The screenshot shows the Salesforce Business Manager interface. At the top, there's a navigation bar with 'Sandbox - zzm', 'RefArch', 'Merchant Tools', 'Administration', 'Storefront', and 'Toolkit'. Below this, there's a 'Select a Site' dropdown menu. The menu is open, showing options: 'Select a Site', 'CustomSite', 'RefArchGlobal', 'RefArch' (with a checkmark), 'ChCertification', 'CocoMarch', 'SiteGenesis' (highlighted with a red box), and 'SiteGenesisGlobal'. A red arrow points from the right towards the 'SiteGenesis' option. The background shows a 'Welcome to Business Manager' message and a search bar.

- Change the code version in **Administration > Site Development > Code Deployment**, locate the code version **katapult\_sg** and press in **Activate**

[Administration](#) > [Site Development](#) > Code Deployment

## Manage Code Versions

A code version is a folder containing custom cartridges. The currently active code version is used by the instance. Custom cartridges need to be assigned to sites in the module "Manage Sites". Additional code versions can be uploaded to the server via WebDAV or UX Studio. These may be new code versions that will be activated later, or old ones to allow for code rollbacks. You can delete inactive code versions. It's also possible to create a new empty version using the Add button on this page.

If multiple code versions are listed, you can activate an existing version from the list by selecting the Activate link next to it. Selecting Roll Back will automatically activate the previous version, if this code version is still installed.

A compatibility mode can be assigned to each code version and this compatibility mode is activated when the code version is activated. Code versions that haven't been explicitly assigned to a compatibility mode are marked with an asterisk (\*), and assume the current active compatibility mode. At any time the compatibility modes selectable are those newer than the active mode in addition to the previously active compatibility mode. It's not possible to select a compatibility mode older than the previously active one.

<a href="#">Select All</a>	Active	Code Version	Compatibility Mode	Modification Time	Activation Time	Actions
<input type="checkbox"/>		<a href="#">CH_v1</a>	<a href="#">19.10</a> *	6/18/20 4:15:38 pm	6/17/20 8:58:58 pm	<a href="#">Rename</a> <a href="#">Activate</a>
