

## User Guide SG - Create, Place and Cancel an Order with Katapult

- Verify that the product selected is leasable, go to **Business Manager** and **Merchant Tools > Products and Catalogs > Products**

[Merchant Tools](#) > [Products and Catalogs](#) > [Products](#)

### SiteGenesis - Products

Select **Simple** to search for products by ID or name, **Advanced** to specify more search fields and sorting criteria, or **By ID** to display a list of product IDs.

Simple searches are case-sensitive. You can use an asterisk ("\*") to find matching strings. A wildcard search is also possible (e.g., "Fo\*", "\*Fo", "\*Fo\*")

See [Product Preferences](#) to add columns to this page and all other product lists.

<b>Product Search</b>	<b>Simple</b>	Advanced	By ID
Name or ID: <input type="text"/>	<input type="button" value="Find"/>		
<input type="button" value="New"/>			

- On the input field search for the ID of the product selected in the Storefront

Order Status: Open Apply Cancel

Shipping Status: Open Cancelled

\*\*\*Merely illustrative product

- Now the order is canceled in Salesforce, to cancel the order in Katapult you need to run a Job. To do this go to **Administration > Operations > Jobs**

## JOBs

Our JOBs cover four Methods: **Shipped**, **Cancel**, **Cancel Item** and **Completed**.

**Shipped** - Set a delivery date in the Katapult's management.

**Cancel** - Cancel the entire order.

**Completed** - Mark an order for not to be reprocessed.

**Cancel Item** - Cancel the items individually.

**i** Your integration must provide the update line items in the SFCC.

You can Update Line Items through:

OCAPI (Open Commerce API)

- Add a Hook to POST order update to the cancel item endpoint. Like below:

```
var orderTest = OrderMgr.getOrder("00001301");
Transaction.wrap(function() {
    for(i in order.productLineItems){
        //Here goes a test in order to verify which line item has to be canceled.
        orderTest.productLineItems[i].externalLineItemStatus = "canceled";
        orderTest.productLineItems[i].custom.KAT_cancelItem = true;
    }
});
```

XML

- The xml file must have a content like below:

```
<external-line-item-status>canceled</external-line-item-status>
<custom-attributes>
  <custom-attribute attribute-id="KAT_cancelItem">true</custom-attribute>
```

**i** A test controller was created. In this controller we pass the parameters in the url, where the "CancelItem" is the controller, "cancelItem" is the method, "oid" is the order ID and the "oli" is order line item. See a example url below:

<https://www.yoursite.com/CancelItem-cancelItem?oid=00001203&oli=sony-ps3-console>

US/CancelItem-cancelItem?oid=00001203&oli=sony-ps3-console

To avoid change Scope every time, was created one JOB to SFRA and another to SG:

Search by ID

Step: complete

Execution Scope: RefArch

Description: N/A

Exit Status: OK

Start Time: 1:13:38 am, Dec 24, 2020

End Time: 1:13:38 am, Dec 24, 2020

## Switch site to SFRA

- Open the options and select RefArch

The screenshot shows the Salesforce Commerce Cloud Merchant Tools interface. The 'SiteGenesis' dropdown menu is open, displaying several options. The 'RefArch' option is highlighted with a red rectangular box. A red arrow points from this box to the 'General' tab in the background interface. The background interface shows the 'Products' section for a specific product (883360541082 - General) with tabs for Pricing, Inventory, Categories, Links, Recommendations, Bundles, and Product Sets. A message at the bottom indicates that the site is locked for editing and will unlock in 52 minutes and 18 seconds.

- Change the code version in **Administration > Site Development > Code Deployment**, locate the code version **katapult\_sfra** and press **Activate**

[Administration](#) > [Site Development](#) > Code Deployment

## Manage Code Versions

A code version is a folder containing custom cartridges. The currently active code version is used by the instance. Custom cartridges need to be assigned to sites in the module "Manage Sites". Additional code versions can be uploaded to the server via WebDAV or UX Studio. These may be new code versions that will be activated later, or old ones to allow for code rollbacks. You can delete inactive code versions. It's also possible to create a new empty version using the Add button on this page.

If multiple code versions are listed, you can activate an existing version from the list by selecting the Activate link next to it. Selecting Roll Back will automatically activate the previous version, if this code version is still installed.

A compatibility mode can be assigned to each code version and this compatibility mode is activated when the code version is activated. Code versions that haven't been explicitly assigned to a compatibility mode are marked with an asterisk (\*), and assume the current active compatibility mode. At any time the compatibility modes selectable are those newer than the active mode in addition to the previously active compatibility mode. It's not possible to select a compatibility mode older than the previously active one.

<a href="#">Select All</a>	Active	Code Version	Compatibility Mode	Modification Time	Activation Time	Actions
